

Case Study

Scene Double helps The Projection Partnership deliver reliable AV content in challenging installations

Photo: Jigsaw Live Events

The Projection Partnership, a UK specialist supplier of large screen video and data projection rental systems is often faced with difficult locations in which they need to install high resolution audio and video presentation systems of the highest quality. In many cases running thick and cumbersome multi-core audio and video cables is not a viable option. In these applications, The Projection Partnership turns to Scene Double's extensive range of Keyboard, Video and Mouse (KVM) extenders for a solution.

Using standard Cat 5 cables or fibres, Scene Double's KVM extenders enable high quality digital audio and video signals of up to 1080p resolution to be transmitted up to 250 metres. This allows small discrete cabling or an existing network to be used to transmit sound and pictures, providing solutions that in many cases could not be achieved. Thomas Conlon, The Projection Partnership's Operations Director: "We operate at many live events and at different locations throughout the year and often have a need to run audio and video over long distances, either through a building's existing flood cabling or by laying new cables. In the latter case, the advantages of using thin, flexible and easily obtainable CatX cables offers many advantages, not least of which is the simplicity with which it can be hidden away and protected from damage due to its inherent handling properties. The alternative is to deploy thick, inflexible multicore cables that require amplifiers at frequent intervals which are much harder to conceal and have a higher cost per metre factor. Scene Double's KVM devices are of the fit-and-forget type that are simply installed and ignored, operating reliably and without intervention and with simple set-up; which is exactly what we want, so they are used regularly."

Ray Gordon, Founder and Director of Scene Double comments: "We have designed these products for transparent, highly reliable operation and this is just one of a wide range of applications that they are used for. It is extremely satisfying when users say that they can ignore the devices, in that they are doing their job in the background without complicated set up or intervention."

About Scene Double

Scene Double's design and manufacturing experience and expertise in the professional KVM and video extension market stretches back over 19 years from its formation in 1991. Many products are manufactured under OEM relationships with some of the computer industry's largest suppliers of computer systems and peripherals from Scene Double's own UK-based state-of-the-art manufacturing facility capable of volume surface-mount and complete product assembly. Direct sales of KVM, DVI and video extension and switching devices is also undertaken from the headquarters site in Hertfordshire to major organisations throughout the world where they are renowned for their quality, innovation and reliability.

Scene Double has entered into a number of technology cross-licensing and marketing deals with other companies in similar markets. The company prides itself on a strong level of personal support, provided in most case by engineers responsible for original product design. This has culminated in the recent opening of a fully equipped and spacious training facility for all its own products, together with those of its partner companies. Scene Double also offers full system specification services to assist dealers and system integrators in specifying and using its KVM and DVI switching and extension product range.
