Scene Double launches IHSE Draco Major KVM and DVI Matrix Switch

Draco Major: a uniquely integrated digital video switching and extension solution.

Scene Double, sole UK distributor of IHSE DVI switching and extension solutions is pleased to announce the launch of the Draco Major KVM and DVI Matrix Switch into the UK market. The Draco Major Switch sets a new milestone: for the first time, USB and high quality DVI sources up to 1080p resolution can be switched through a Matrix switch and routed to remote points over long distances using CatX or Fibre cables.

The Draco Major solution offers various modes of KVM and video operation. A single 2U chassis is capable of switching up to 32 CPUs or real-time video sources to 16 monitors. In addition, options exist to handle all manner of USB 2.0, audio and serial devices. The Draco Major Switch interfaces directly to copper and fibre cabling, enabling combined switch and extension functionality up to 250 metres over copper and 20 Km with single mode fibre, without quality degradation.

“The Draco Major sets a benchmark in computer and video distribution systems”, said Ray Gordon, Founder and Managing Director of Scene Double. “IHSE’s renowned product development together with Scene Double distribution and support makes this a winning combination for anyone looking for the highest quality video display and control functionality in distributed computer systems at an extremely competitive price point.”

Built-in flexibility and instantaneous video switching expands the use of the Draco Major to a wide variety of applications. On-screen control combined with flexible user administration enables devices to be configured in groups to meet individual application requirements including dual and quad head configurations. Network and serial interfaces further the capability of the switch for efficient integration with users’ custom control equipment.

“Our development team has produced a system that delivers key operational capability in a variety of markets” said Peter Striegel, CEO of IHSE. “Draco Major is ideal for control rooms that require instantaneous video switching capacity, as a DVI crosspoint switch for broadcast, and even as a dynamic CPU allocation system in financial and commercial sectors.”

About Scene Double

Scene Double's design and manufacturing experience and expertise in the professional KVM and video extension market stretches back over 19 years from its formation in 1991. Many products are manufactured under OEM relationships with some of the computer industry's largest suppliers of computer systems and peripherals from Scene Double's own UK-based state-of-the-art manufacturing facility capable of volume surface-mount and complete product assembly. Direct sales of KVM, DVI and video extension and switching devices is also undertaken from the headquarters site in Hertfordshire to major organisations throughout the world where they are renowned for their quality, innovation and reliability.

Scene Double has entered into a number of technology cross-licensing and marketing deals with other companies in similar markets. The company prides itself on a strong level of personal support, provided in most case by engineers responsible for original product design. This has culminated in the recent opening of a fully equipped and spacious training facility for all its own products, together with those of its partner companies. Scene Double also offers full system specification services to assist dealers and system integrators in specifying and using its KVM and DVI switching and extension product range.

About IHSE

IHSE GmbH was founded in 1984 in Friedrichshafen, near Lake Constanze, in Germany. In its early years, the company supplied software for industrial automation and technical data processing applications.

Today, the focus of IHSE's business is KVM extenders, switches and video routers. KVM Extenders allow the remote location of computer consoles (monitor, keyboard and mouse) to be located at very long distances from the related computer. KVM crosspoint switches, enable different computers to be accessed through one or more consoles. IHSE's high end DVI extension and switching solutions are unique in the market place and allow remote control over both copper and fibre optic media.
